
S&B BARRICADE ITech™

*‘The most advanced Steel Hoarding Panel system in
the WORLD!’*

BARRICADE ITech™ a fully re-usable Panel site enclosure system:

The benefits are endless:

- *Patented & Cost Effective: Interchange Technology is a breakthrough providing low damage, repair and replacement costs. Strength and construction quality mean high re-use capability*
 - *Round top Construction: Gives the panel extra strength making it the most heavy duty available.*
 - *Safety & Flexibility: The best and widest range of bracing systems means there is a safe, appropriate system for any site.*
 - *Corporate Image: High quality powder coated and galvanised finishes portrays a highly professional image.*
 - *Safe in Situ: fully wind tested systems give peace of mind*
 - *Safe in Use: all components fall within current manual handling legislation*
 - *Flexibility: The widest range of ancillaries covers all scenarios*
 - *Highly Competitive: available for sale, hire and contract hire*
-

RADICAL AND UNIQUE DESIGN

The radical design of BARRICADE ITech™ incorporates several unique features. The continuous, Round top frame adds extra rigidity and also allows sheets to be replaced easily without compromising the strength of the panel – No other panel can do this.

Previously, a panel with a badly damaged sheet was only fit for scrap. Now, the sheet is replaced at less than half the cost of a full panel.

INSTALLATION

Barricade can be installed in-ground with posts concreted into sockets or core drilled into concrete or tarmac.

Free standing systems are available including the patented 'Windjammer' system – The strongest weighted system available.

Also, fix to scaffold, bolt down and fix to wall systems are also available from stock.

VERSATILITY

The systems' flexible design and full range of ancillaries, ensures that BARRICADE ITech™ is suitable for virtually any site conditions.

Accessories include heavy duty gates, personnel doors, barbed wire extensions, mesh height extensions, vision panels plus many more.

COST EFFECTIVE

BARRICADE ITech™ cost effectiveness is a result of the systems high re-use factor, offering contractors the ability to relocate hoarding onto subsequent contracts, as they do with site cabins and storage units.

Maintenance is also kept to a minimum as the tough polyester powder coated and/or galvanised finishes can simply be periodically washed down to retain the professional image and keeps looking good long after painted finishes need re-decorating. In addition, the corrugated profile deters both bill posting and graffiti because of its non flat surface.

SUPPLY AND DISTRIBUTION

BARRICADE ITech™ can be supplied worldwide on a sale or hire basis offering a complete installation, dismantle and relocation service.

All components fall within the EEC lifting regulations and customers can easily install and re-use the system themselves.!

PRICE

Guideline Sale Price List 2007 for Materials:

- | | | |
|----|---|-------------------|
| 1. | Barricade ITech™ Fully galvanised panel | £ 17.14 per metre |
| 2. | Lockable Pedestrian Gate galvanised | £350.00 each |

- Jem
- Following the completion of the Hoarding works at Horbury High School, we would thank you for your pro-active approach to completing the works within our Programme.
- Also, the quality of the operatives sent to site was of a high standard, and they completed the works efficiently solving any problems they may have come across using there own initiative and not solely relying on our site team.
- To that end, the experience of working with S&B has been a pleasurable one, and we look forward to working with you again in the future.
- regards
