Alleygates protect Belfast's alleyways

Professional Ball Courts for Lisburn City Council

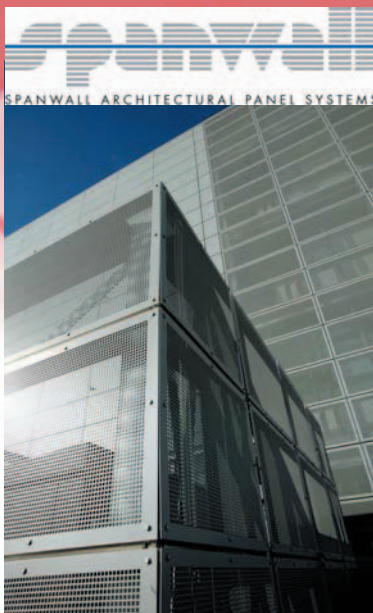

Fultons new site at Boucher demands Bekamatic security

GRP solutions with Environmental Fabrications

Stunning Walkways at University of Ulster

Ferguson McIlveen specified perforated metal mesh manufactured by RMIG and supplied by *RIDGEWAY* for the cladding screen system at the newly opened prestigious White Star House in Titanic Quarter.

The sheets of perforated metal were delivered directly from our *RIDGEWAY* professional stock centre to EDM for fabrication and coating.

Main contractors on site were H & J Martins, while Sub-contractors Grainger's from Hollywood worked in partnership with EDM Spanwall to

produce a truly stunning façade for the stairwells and plant rooms. They used Ridgeway Specialist perforated aluminium sheets to achieve this look.

Expamet Alleygates protecting Belfast's Alleyways

Belfast City Council Community Safety Partnership have selected the Ridgeway Expamet Alleygator™ high security gate system to protect the city's alleyways from various forms of anti social behaviour and vandalism. This Secure By Design™ product is tested to very tough and rigorous standards testing it to the limit on attacks using various means. The key management system is designed to offer a controlled and logical operation of access by local residents and services requiring emergency access. The

introduction of such a gating system into inner city areas throughout the UK has shown great success in promoting safer community living

whilst proven statistics show a marked reduction in crime. Red Skye Group were selected by Belfast City Council as the preferred local contractor for this prestigious project and RIDGEWAY are delighted to be working closely with them during the installation program.

Specialist Gabion Installers Ecomesh get creative at Altnagelvin

Farrans have selected Ecomesh Ltd's gabion division as a specialist sub contractor to install additional architecturally clad gabion walls on the high profile hospital site at Altnagelvin. Using the Betafence Concertainer Weldmesh Gabion system, local architects, HLM selected a dressed faced wall using the

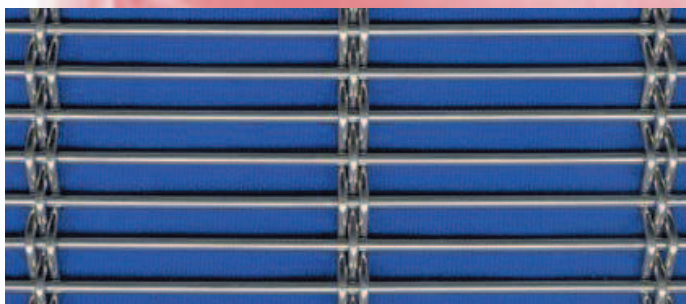

Weldmesh™ heavy gabions available ex stock from RIDGEWAY. The site features many uses for gabions walls including a unique helipad structure. Ecomesh are active in promoting gabion cladding throughout the UK and Ireland and are a Betafence recognised professional installer.

Warwick Engineering & Pattons produce stunning walkways in University of Ulster's Warwick Building

Ridgeway's architectural woven mesh, 'Adriatic' manufactured by Potter & Soar was selected to enhance the ballustrading in the internal atrium in the Warwick building of the University of Ulster. This high quality stainless steel mesh provides a sophisticated woven pattern delivering a practical and stunning solution to architectural stairs and walk-

ways. Cecil Warwick Engineering where awarded this prestigious contract by Pattons of Ballymena and Ridgeway are absolutely delighted to feature this in their newsletter as a excellent exam-

ple of modern metalwork and craftsmanship by this progressively expanding steelwork company.

Secure by design for NIR translink

Translink have specified Expamet Fastrack style expanded metal fencing systems for several large trackside protection projects throughout the province. This Secure By Design system offers anti-tamper proof protection over traditional Palisade with additional benefits on ease of installation and see through security on track. Expamet have installed 'Fastrack' throughout the

Expamet
Security Products

UK and have penetrated the Irish market with the help of their chosen partner, Ridgeway. Well known specialist contractor, Cameron Fencing from Mallusk have been selected for their renowned professional installation on key projects and Ridgeway are pleased to be associated with them on these important contracts.

New Fultons retail site at Boucher demands Bekamatic security

Gilbert Ash have chosen the Betafence Bekamatic Gate as their access control gate system for the services entrance on the new exclusive Boucher Road site. Installed by Clerk Fencing this unique cantilevered automatic gate features all the latest European safety standards and is TÜV and

SOCOTEC certified: This certification confirms that the gates comply with the requirements of Euro Norm

EN 12453 in every aspect of mechanical, motorisation, electronics and security specifications.

Clerk Fencing & John McQuillians – Professional Ballcourts for Lisburn City Council

Ridgeway have once again created an integrated supply chain by linking the customer, contractor and sub contractor on the installation of a unique ball court fencing system in Banbridge. Pronet contractor; Clerk Fencing from Rostrevor are fast becoming one of Northern Ireland's most preferred fencing installers. Their close association with both the UK and Irish network of professional erectors and stock centres offers a wealth of knowledge and experience on Perimeter Protection systems that at last will 'raise the bar' on fencing standards here in Northern Ireland. The unique ten year insurance backed 'Bekassure' guarantee offers complete peace of mind to the

client on the integrity of the system and the workmanship of the erector. Independently audited, this fencing system has been professionally designed for use as a truly safe, strong and best value solution for multi games uses. Ball court systems and gates are delivered directly from our stock centre to site ready for fast track installation

via Ridgeway's independently approved Pronet™ installers.

PASMA Approved Training Centre

PASMA at RIDGEWAY

Ridgeway have long been associated with scaffolding and access equipment. As a PASMA member we are delighted to be the first locally approved PASMA training centre in Northern Ireland. Promoting the safe use of alloy tower systems and advanced training, Ridgeway's training facility offers industry recognised approved training to a flexible program throughout the year including paint spray training, contact our sales team for further information.

George Best City Airport

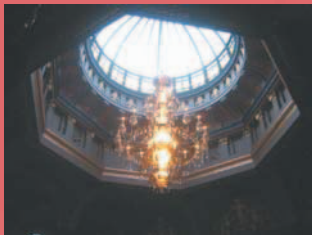

Working at Height Safely

Ridgeway are pleased to be the access hire supplier for the safe installation of the new signage on the George Best City Airport. Local sign contractor Visual Edge hired the proper working platforms from Ridgeway for this prestigious contract.

Vast Stock of Fencing Gates at RIDGEWAY

The professional stock centre continues to thrive on its fast stock service for fencing systems, from temporary 'Ridgefence' to Paladin FX Perimeter Protection. As the network grows in Ireland the demand for high quality low cost stock gates to contractors has increased, speed is of the essence in delivering on time every time. Ridgeway play a key role in the supply integration on fencing contracts from specifying and installation to post contract appraisal, surveying and end client service. Our Betafence presence in Ireland is focused on quality perimeter protection solutions that give clients true Best Value to protect their investments long term rather than cheaper alternatives known to prove costly on maintenance.

Ridgeway 'On Site Services', our professional alloy scaffold erecting team were first to the mark when the contractor needed fast access to install this fantastic chandelier in Belfast's most exclusive new hotel. Mark Logan

and his team responded quickly and dismantled this 50ft

tower within the specified timeframe and the stunning result can be seen above. This hotel is a must see for anyone wishing to view the more lavish developments our city expansion is demonstrating.

Environmental Fabrications show expertise in GRP solutions.

Environmental
fabrications Ltd

Environmental Fabrications from Dromore, Co Down are one of the most innovative steelwork contractors in Ireland. Their particular focus on partnering and 'on time programs' make them a preferred specialist sub contractor on many key infrastructure projects working with key main contractor players such as John Grahams and Farrans. New materials such as GRP are being introduced into the water industry to compliment structural designs on performance flooring, hand railing products and GRP structural profiles. To compliment concrete and steel designs, GRP offers economical designs with impressive strength

to weight and load properties together with resistance to corrosion and fire now required in all chemical bund areas and holding tanks. Environmental Fabrications have recently supplied a complete structural package to the Clay Lakes treatment plant with steel and GRP solutions for structural supports, walkways and edge protection. Environmental Fabrications have been approved by Redman Fisher Composites as a professional installer for GRP and Steel solutions in Ireland. Ridgeway continue to promote and encourage partnership and collaborative working with sub contractors across Ireland and welcome the strength that

Environmental Fabrications will bring to the local construction industry and its professionals.
