Span 500X

ACCESS TOWER SYSTEM

Span 500X is a new highly adaptable, fast and easy to assemble tower system with a rung spacing of 500mm. This lightweight tower features integral weldless ladder frames. The Instant flexible low maintenance tower can be constructed with platform heights in 0.5m increments and does not need separate guardrails. With fewer components to stock or lose this versatile ladder frame can be used to construct simple free standing towers or more complex staging systems with a host of accessories. The Z-configuration bracing enables quick, trouble free assembly providing a very rigid structure.

All Instant towers feature the unique high strength Rib-Grip jointing system. This mechanical joint system has been proven for over 60 years. It is stronger and more durable than a welded joint and carries our no quibble 10 year joint guarantee. In addition, all other parts carry an extended 3 year warranty as standard – just what the professional needs to ensure peace of mind.

Span 500x Towers are available in both narrow (0.85m) and wide (1.45m) versions, with lengths of 2m, 2.5m and 3m. They are compliant with EN1004 and can be assembled in compliance with Work at Height Directives.

Key Features

1. Rib-Grip – cold formed joints

The cold-formed Rib-Grip jointing process is a key feature of the Instant tower system and provides three times the strength and durability of traditional welded joints. 10 year no question warranty!

2. Span 500X Frame – reversible multi-purpose frames

High-strength lightweight aluminium alloy construction makes components easier to handle.

3. Adjustable Leg

A choice of 400mm, 600mm & 800mm height adjustment is provided by Quick-Adjust legs. This provides quick and easy levelling on rough or uneven surfaces. Once loaded they cannot be accidentally released.

4. Automatic locking Brace Hooks & Heavy 'Rhino-nose'

Hooks snap into locked position without prior 'priming' and an easy-release catch design aids disassembly. The large contact area (over 225°) gives a firm grip. The Rhino-nose is very durable for arduous site conditions resisting damage if dropped.

5. Fluted ladder rungs

Provides better grip and increased slip resistance when climbing ladders during assembly or once erected.

6. Span 500X Platform

The Span 500x platform is available in standard and trapdoor formats. It provides all-round edge protection.

New Snappy Ladder

This Snappy Ladder takes seconds to assemble, is easy to transport in a small van, and offers a perfect solution to low level access challenges.

A wide range of components and accessories are available for the Span Access Tower Systems providing maximum versatility.

Walk-thru frame

High Clearance Platform

Spandek Walkway

Ballast Weight

Nylon Coupler

Base Plate

Painted Tower

A painted finish can be applied to any product in the INSTANT range. This offers a permanent solution for 'tower' identity on the work site.

Key advantages: strengthens corporate identity, differentiates inventory from competitors, suffer fewer losses than non-branded towers.
