# Limpet® is the best performing and most cost-effective solution to the safety and access challenges of the oil and gas sector.

Limpet Technology offers 3 models of Limpet®; the **L5** which provides climb assist, fall prevention, rescue & evacuation and suspended access functions, the **L2** which provides climb assist and fall prevention functions and the **L1**, which provides climb assist only.

	INTELLIGENT CLIMB ASSIST	PROACTIVE FALL PREVENTION	PRECISE WORK POSITIONING	CLIP & GO EVACUATION	RAPID REMOTE RESCUE
L1	Yes	No	No	No	No
L2	Yes	Yes	No	No	No
L5	Yes	Yes	Yes	Yes	Yes

## Limpet® Multifunction saves Time, Money & Lives

### 1. INTELLIGENT CLIMB ASSIST®

Limpet® 90% Climb Assist delivers up to double the assistance of other products. Engineers can do twice the number of climbs with half the effort, which translates into lower maintenance costs and faster repairs (L1, L2 & L5)

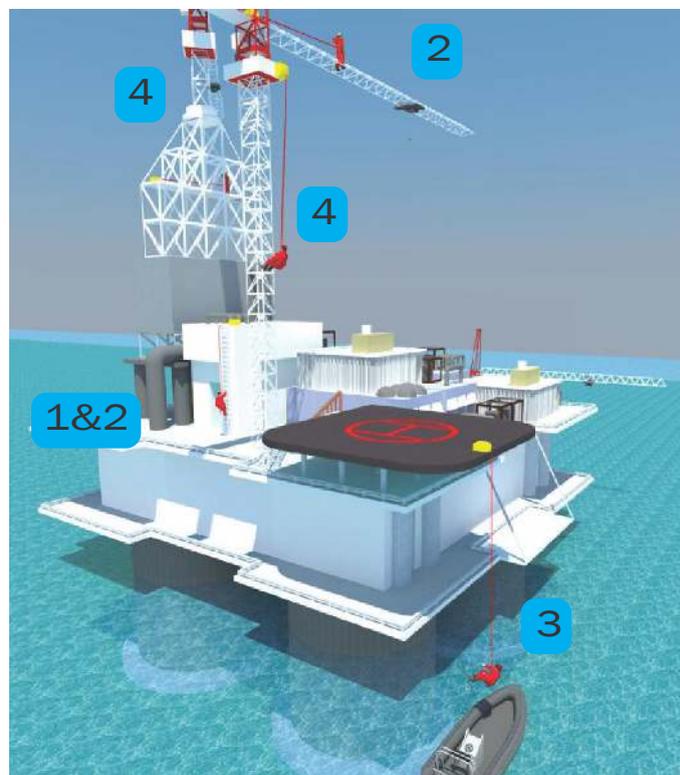

### 2. INTEGRATED FALL PREVENTION

Limpet® Proactive Fall Prevention is built-in. Limpet® provides a constant tight rope from above, and stops falls from occurring in the first place, with slips arrested within 10mm (L2 and L5).

**3. INTEGRATED RESCUE & EVACUATION** The Limpet® incorporates evacuation & rescue functionality. A typical rescue conducted using the Limpet® can take less than 4 minutes compared with 40 minutes using conventional methods (L5)

### 4. SUSPENDED ACCESS

Limpet® is a simple, cost-effective but absolutely dependable method for accessing legs, spider decks or drilling derricks, allowing workers to hoist or lower into position and removing the need for expensive and time-consuming rope access techniques and IRATA trained personnel. (L5)

## Limpet®: “An Engineering Marvel”

*“It (Limpet) is an engineering marvel! I was able to activate the climb assist with both hands and feet still on the ladder rungs. The system took nearly all of my body weight (90%) and it was a dream to climb. To test the fall arrest mode, I slumped and let go and was stopped in less than a half inch. I could stay connected and work in an area without interference from the Limpet line.”*

Mike Parnell, President, ITI – Field Services (Dec 2011)
