## Ridgeguard Firmus Pedestrian Restraint Systems

### PEDESTRIAN BARRIER

Our new Firmus pedestrian barrier has a generous 2 metre working length and a height of 1 metre. Made from high density polyethylene it offers a reassuring presence to any site or walkway.

The Firmus creates a highly visible protective wall for pedestrians, whilst making sure motorists are appropriately cautioned that they are in close proximity to a hazardous area.

It can be deployed with ease in either a straight line or can be angled to accommodate more irregular excavations. With its link pin design it is ideal for use on uneven surfaces, kerbs and slopes without compromising stability and with the option of an anti-trip foot it keeps walkways clear without encroaching on pedestrian space. Fitted with a reflective strip the Firmus is clearly visible at night or in bad weather and has the option to add beacons or hazard warning signs.

### FEATURES

- One piece construction
- Made from prime HDPE
- Chapter 8 compliant
- Universal pin connection to existing systems
- Personalisation option
- Signage can be added
- Standard or anti-trip feet
- Stackable for easy transportation and storage
- Designed and manufactured in the UK
- 100% recyclable
- Manufactured to meet industry standards as per Red Book 2013

### SPECIFICATIONS

Width:	2035mm
Height:	1075mm
Depth: (barrier)	42mm
(foot)	230mm
Weight:	12kg

Anti trip foot

1840

45 per pallet

Feet can be coloured
